Java Programming Project Presentation

INTRODUCTION

The internship application process in many colleges is still done manually, which can cause confusion, delays, and lack of transparency for students. To solve this problem, I developed a Student Internship Application and_Status Tracking System.This system allows students to apply for internships and track their application status in real time. It also helps companies to manage applications and update results, while the admin can monitor the entire process. Overall, this system reduces manual work, saves time, and makes the process more efficient and organized

Java Programming Project Presentation

OBJECTIVE

- To develop a web-based internship application and tracking system
- To allow students to apply and track application status
- To enable companies to post internships and manage applicants
- To reduce manual work, delays, and lack of transparency
- To improve efficiency through automation and structured data
- To provide instant updates and better communication

Java Programming Project Presentation

PROBLEM STATEMENT

Current Issues

- Manual process (emails, spreadsheets)
- No centralized system
- Difficult to track status

Limitations

- Delays in processing
- Lack of transparency
- Poor communication
- Hard to manage many applications

Proposed Solution

- Centralized web-based system
- Easy application & status tracking
- Efficient application management
- Improved communication & transparency

SYSTEM REQUIREMENTS

Hardware Requirements:

- Processor: Intel i3 or higher
- RAM: 4 GB minimum
- Storage: 500 MB free space

Software Requirements

- Operating System: Windows / Linux
- Programming Language: Java
- JDK: Version 8 or above
- IDE: Eclipse / IntelliJ IDEA
- Database: MySQL
- Web Server: Apache Tomcat
- Frontend Technologies: HTML, CSS, JavaScript

SYSTEM DESIGN

Structure of the System

- Follows 3-tier architecture

1. Presentation Layer (User Interface)
2. Application Layer (Business Logic)
3. Data Layer (Database)

Workflow of the System

- User logs into the system
- Student views and applies for internships
- Data is processed and stored in database
- Company reviews applications
- Status is updated
- Student tracks application status

TECHNICAL TEAM

Java Programming Project Presentation

MODULE DESCRIPTION

The project contains 4 main modules :

1. Student Module → Apply for internships and track status
2. Company Module → Post internships and manage applications
3. Admin Module → Monitor and manage the system
4. Database Module → Store all data

TECHNICAL TEAM

Java Programming Project Presentation

ALGORITHM

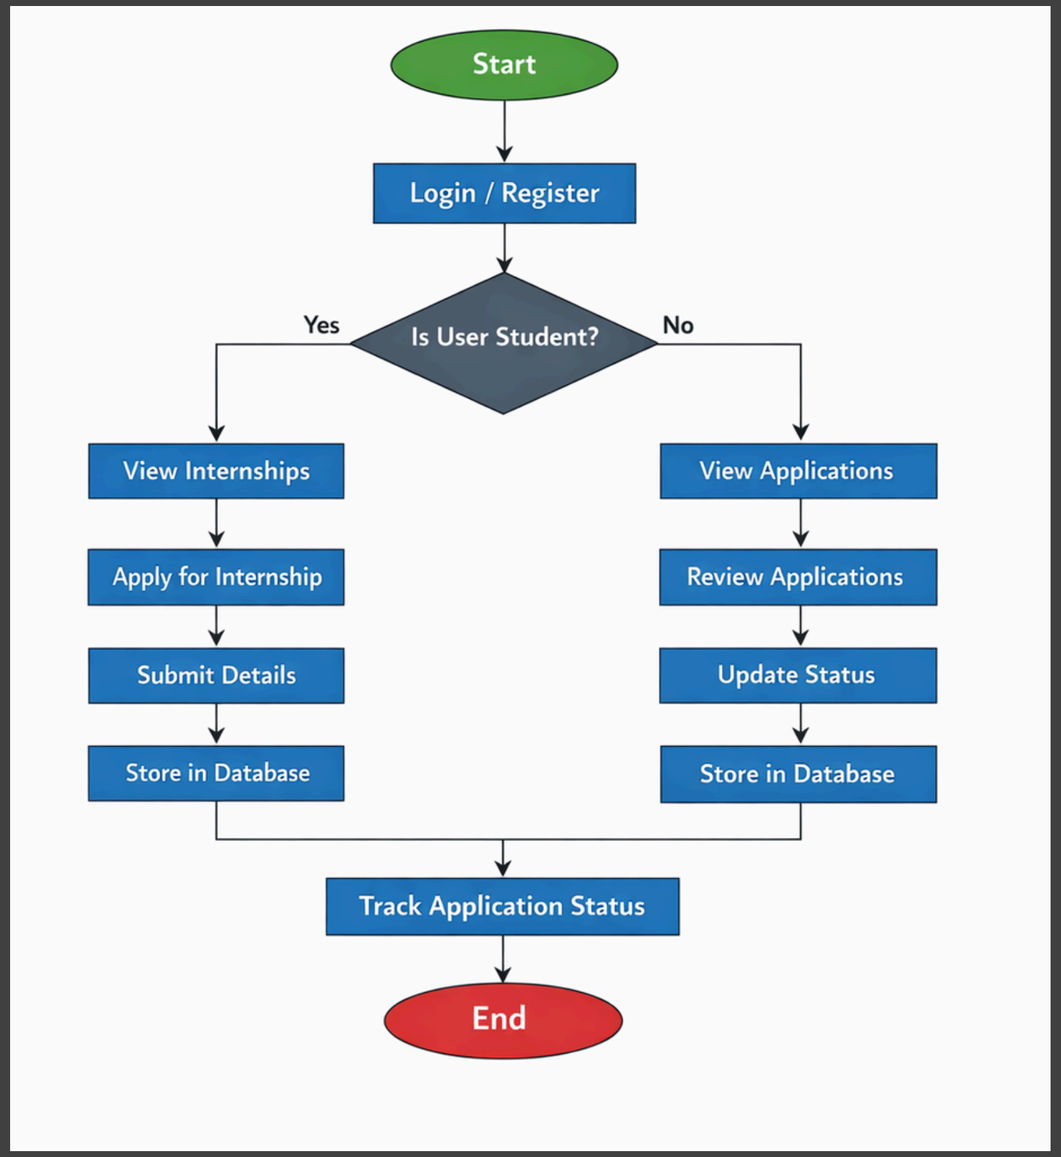

1. Start
2. User registers or logs into the system
3. If user is a student:
    - View available internships
    - Select and apply for internship
    - Submit application details
4. Store application data in database
5. If user is a company:
    - View student applications
    - Review and update application status
6. Update status in database
7. Student views updated application status
8. End

IMPLEMENTATION

Techniques Used

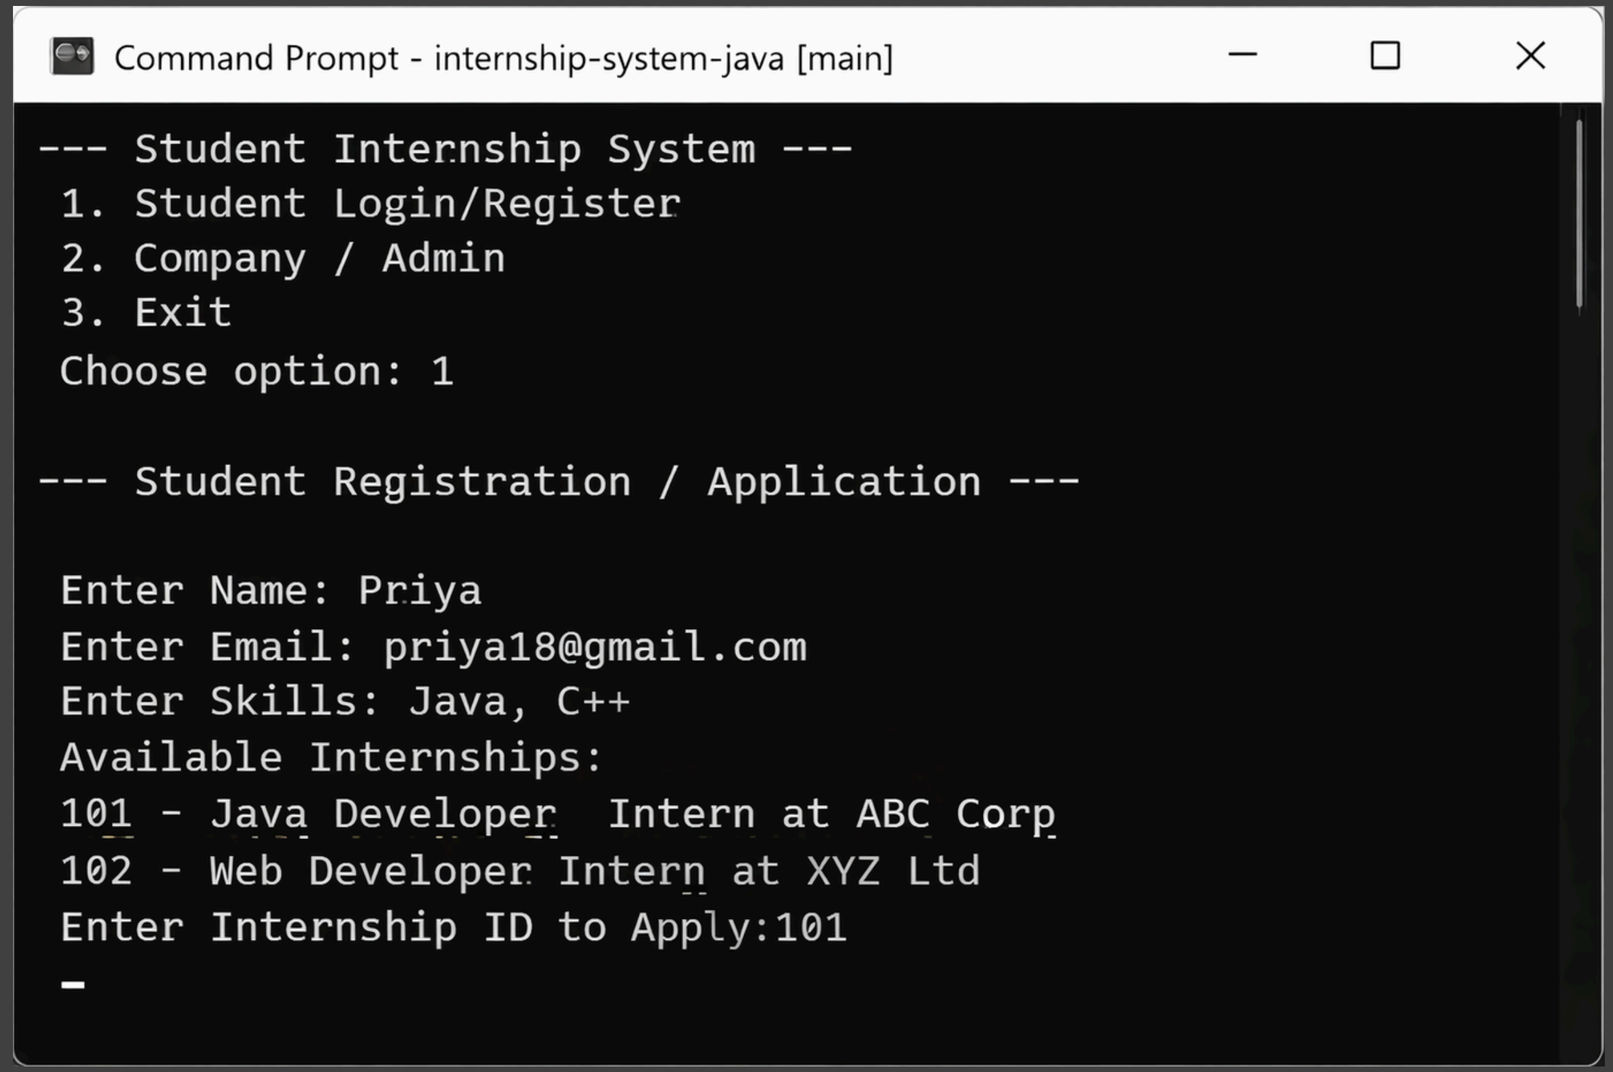

- Object-Oriented Programming (Classes and Objects)
- Conditional statements (if-else)
- Loops (for, while)
- Functions / Methods
- Database connectivity (JDBC)
- SQL queries (INSERT, UPDATE, SELECT, DELETE

RESULTS AND DISCUSSION

- RESULT

The system successfully allows students to enter their details,view available internships, and apply for them.After submission, the application details along with the status are displayed correctly. The admin can also view and update the application status. Overall, the system performs all required functions properly.

- DISCUSSION

The system works efficiently and produces accurate results. It uses simple data structures for handling data and runs smoothly without errors. However, it is limite to a console-based environment and does not store data permanently. In future, it can be improved by adding a database and converting it into a web-based application.

CONCLUSION & FUTURE ENHANCEMENTS

- CONCLUSION

This project helps students apply for internships and track their status easily. It reduces manual work and makes the process faster and more clear.

- FUTURE ENHANCEMENTS

In future, we can add a database for storing data permanently and convert it into a web-based application. We can also add features like login system and notifications
